

Tab 1

Topic: Flexible Domestic Space

History:

- PDF: <https://jeremytill.s3.amazonaws.com/uploads/post/attachment/9/flexi20.pdf>

Era	Philosophy	Key Innovation
1920s (Modernism)	"Free Plan"	Sliding partitions (Schröder House)
1960s (Radical)	"Plug-In / Capsules"	Replaceable factory-made units (Metabolism)
1970s (Support)	"Supports"	Residents fill in an empty framework (Habraken)
2000s (System)	"Polyvalence"	Smart furniture & time-based usage (Gary Chang)

Precedents:

1. Naked House (Shigeru Ban)

- One big translucent "warehouse" shell.
- 4 wooden room-boxes on **wheels**.
- Move your bedroom wherever you want. Dock them together for heat/AC or spread them out for privacy.
- **Tech:** Industrial materials (bubble wrap, plastic, Velcro) used in high-end ways.

- <https://shigerubanarchitects.com/works/naked-house/>

2. Sharifi-ha House (Nextoffice)

- A modern 7-story townhouse that "breathes."
- 3 rooms **rotate 90°** via electric turntables.
- "Open mode" (Summer) creates terraces and airflow; "Closed mode" (Winter) keeps heat in and looks like a solid wall.
- **Tech:** Uses theater-stage mechanics for structural movement.
- https://en.wikipedia.org/wiki/Sharifi-ha_House

3. Moriyama House (Ryue Nishizawa)

- A "forest" of 10 small white cubes in a garden.
- House is **deconstructed** into separate pods.
- No hallways, you walk through the garden to get to the kitchen or bath.
- **Tech:** Super-thin steel walls (16mm) to maximize tiny interior space.
- <https://arquitecturaviva.com/works/casa-moriyama-tokio-3>

4. Domestic Transformer (Gary Chang)

- 344 sq. ft. apartment that acts like a Swiss Army Knife.
- Walls move on **ceiling tracks** in layers.
- One room becomes 24 different programs (kitchen, library, cinema, guest room) just by sliding panels.
- **Tech:** High-density urban living solved through "UI" layers.
- <https://www.edgedesign.com.hk/2007domestictransformer>

5. House 1101 (HARQUITECTES)

- Three brick boxes with "gaps" in between.
- The "house" happens in the **unbuilt space** between the cubes.
- Boxes are for "static" things (sleeping); the glass gaps are "flexible" (dining, lounging, indoor/outdoor).
- **Tech:** Uses thermal mass (brick) vs. light glass to control climate.
- <https://www.harquitectes.com/projectes/casa-1101/>

6. Wall House 2 (John Hejduk)

- A giant 14m tall wall with "organic" rooms hanging off it.
- Physical **separation** of life and movement.
- You *must* cross the wall to move from room to room. It makes "movement" a conscious, dramatic act.
- **Tech:** Pure geometric and color-coded "Formalism."
- <https://www.archdaily.com/205541/ad-classics-wall-house-2-john-hejduk>

Parameters:

1. Size/scale
2. Demographic
3. Material/assembly
4. Emotional flexibility
5. Movement (mechanics)
6. Time (throughout the day/over time)
7. Culture

- Meeting Notes

Meeting Notes

- Have a cohesive story, unfold your topic
- Criticize or back techniques
- Address local regulations
- Personal customization with elements of domesticity
- Table of contents for digestion, set up what they will see
- Talk about demographic, how is the house observing their needs
- Precedent analysis: how effective was their work?
 - Socially
 - Structurally
 - Success rate
- Cohesive coloring structure
- Talk about how they impacted future research in the field
- Strong visual links
- Talk about how the practice has been used, before architectural study
